Tools required for this installation:

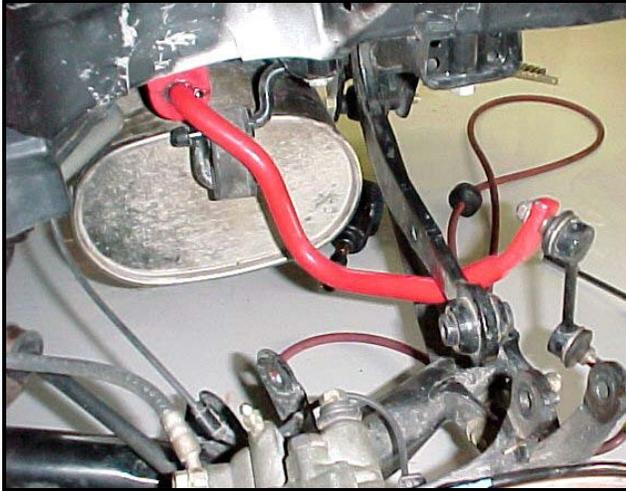

- Hydraulic jack, jack stands, torque wrench
- The following sockets or wrenches: 14mm, 17mm, 19mm, 24mm
 - The following Allen wrenches: 5mm

INSTALLATION OF HOTCHKIS REAR CAMBER LINKS

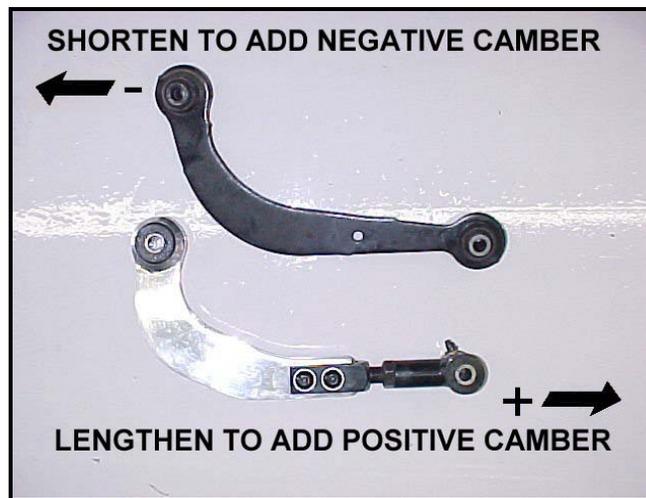

- 1) Securely block the front wheels of the vehicle. Use a jack to raise the rear end of the vehicle and support with jack stands. Remove the rear wheels.
- 2) Use a 14mm wrench and a 5mm Allen wrench to loosen and remove the nut on both end links where they meet the rear spindle assemblies. Use a 17mm wrench or socket to remove the bolt and nut holding the rear upper link to the spindle. Retain all stock hardware.

- 3) Use a 19mm and 17mm socket or wrench to remove the upper camber link bolt where it mounts to the sub-frame. Remove the stock suspension link and retain the stock hardware for later use.

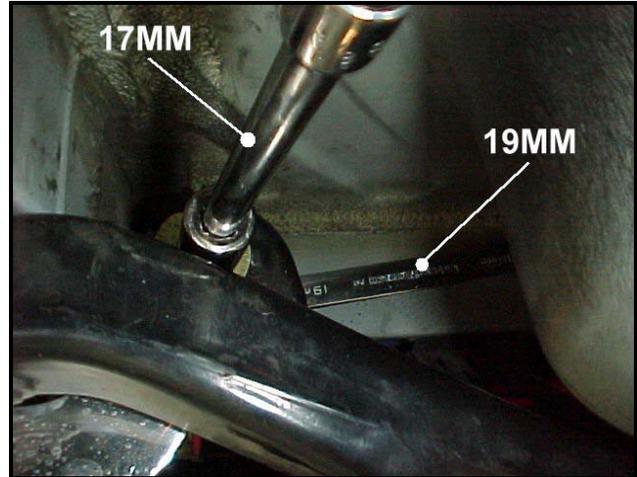

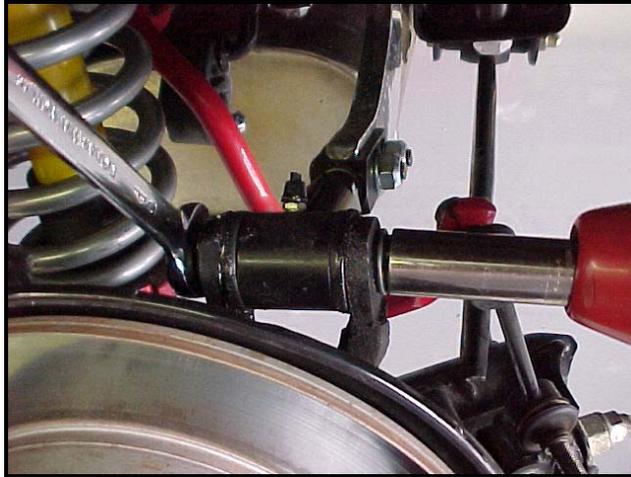

- 4) Match the length of the Hotchkis arm to the center-to-center length of the stock arm. Use a 24mm wrench to loosen the jam nut and rotate the head. Lengthen the arm to add positive camber and shorten the arm to add negative camber.

- 5) Use the grease pack provided to apply a thick coat of grease to the bushing faces on the Hotchkis arm. You can also apply a light coat of grease to the bushing contact surfaces on the vehicle. Install the Hotchkis arm in the stock location and use the stock hardware to mount it.

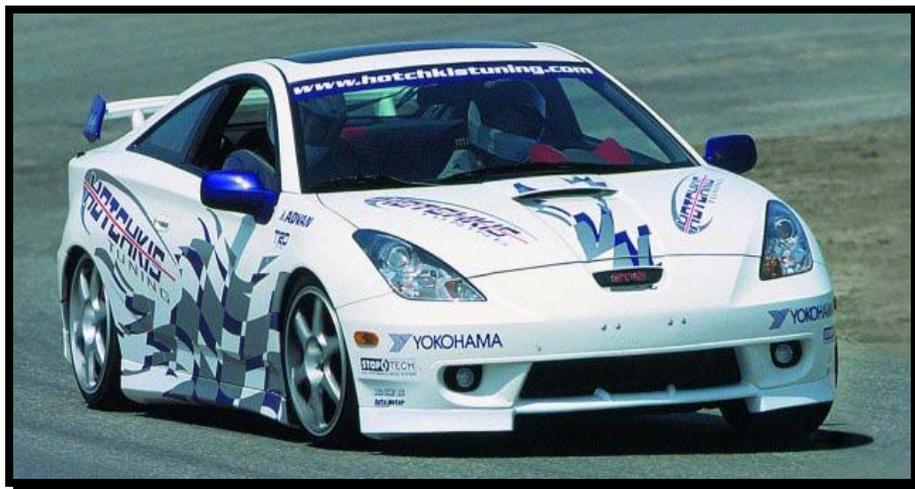

- 6) Use a 17mm and 19mm wrench to tighten the hardware holding the arm in place. Torque the bolts to 55 ft/lbs each.

- 7) Repeat the removal and installation process for the opposite side suspension link.
- 8) Re-check all hardware for tightness. Cover the grease fittings with the plastic zerk caps provided. Replace the rear wheels. Use a jack to remove the jack stands and lower the car. You're finished installing the camber links!

IMPORTANT: For proper maintenance grease the bushings at least once a year (15,000 miles) or whenever excessive noise occurs. Use a non-lithium based grease only! Lithium-based grease can wash out with water and should not be used.

Hotchkis Performance KNOWS Celica like nobody else!

Perhaps you've heard of our first little project...

“Aggressive alignment settings, adjustable parts everywhere and super sticky tires make it among the most fun cars we’ve ever driven on a racetrack. With superb balance and instant communication between the driver and the road, the Hotchkis Celica can easily put the hurt on far more powerful machinery.”

Sport Compact Car, August 2002 Issue “Celica Bash”

This Celica has graced many magazines and been used for extensive testing. As a result of its travels and event participations, it currently holds one and shares another handling record of Sport Compact Car. **This vehicle owns the SCC record for the 600ft slalom at 76.9 mph average**, which bested the previous record speed of 73.8 mph, set by a modified MR2. **It also shares the SCC braking distance record of 97ft in a 60-0 stop**, which bested the previous record of 105ft. Toss in a **skid pad reading of 1.03g (within .01g of another SCC record)** and you’d think we’d be happy right? Well, we’re not even close to being finished with Celica development! Wait until you see our new project...

While establishing the benchmark for handling is nice, we needed a new challenge...

Working closely with Toyota Motor Sports Hotchkis has sought to take Celica to new heights of performance. Having already built a dominant “street car” that was also a strong track car we decided to try our hand at something a tad bit different...

Check out the new **EXTREME** Hotchkis Celica.
